Technical Publications Specialist

Job Description

BlackRidge Technology is a leading-edge cybersecurity technology startup that provides game-changing cyber and network security solutions that cloak and protect enterprise networks, SDN and cloud environments from unidentified and unauthorized user access. We are looking for individuals that learn fast and execute even faster. Ideal candidates are team players who require challenging work and who possess a strong desire to help create innovative solutions that are needed by SMB and large-scale enterprises now and into the foreseeable future.

As a Technical Publications Specialist, you will be responsible for researching and interacting with engineers, subject matter experts (SMEs) and product management to gather information to create and/or update product and solutions content. You will perform self-reviews as well as organize and drive peer review processes. The goal is produce high-quality, accurate, and timely customer-facing documentation that contributes to the overall success and adoption of our products and solutions.

The Technical Publications Specialist will also help design and develop the processes and procedures required to ensure that the most effective method(s) is used to produce timely documentation in support of the end-to-end NPI processes and GA product rollout requirements. You will be responsible for working with both technical SME teammates and management to ensure documentation requirements are fully met for all products.

Duties and Responsibilities

The primary responsibility of the Technical Publications Specialist is to design, develop, and maintain the library of customer product documentation and solutions. Complete ownership of the product documentation library, its contents, and the various delivery formats are included in the scope of this role. Additional aspects of this role and its responsibilities include, but are not limited to, the following:

- Research and employ best practices related to new technical writing methods, processes, and tools.
- Develop and maintain up-to-date project plans for delivering and maintaining product and solutions documentation.
- Partner with engineers and SMEs to understand the technology under consideration to both identify the documentation requirements as well as develop the supporting documentation content.
- Design, develop, recommend, implement, and adhere to documentation standards.
- Interact with existing team members to acquire product and solution knowledge and understanding.
- Produce and deliver high-quality documentation to external partners and customers.
- Work with relevant teams to obtain an in-depth understanding of the product and documentation requirements
- Maintain the information architecture - comprehensive library of technical terminology and documentation.
